

The Number One For Sustainable Growing

How to use Eazy Mixx®

Easy to use

Eazy Mixx is very easy to apply in a thin layer. It will remain easy to handle regardless of the humidity and does not clod, get sticky or form a hard layer where the seedlings will not get through. It is versatile and can be used as a replacement to e.g. vermiculite and is pH neutral.

A good top layer substrate is of great importance for a successful production of seedlings. There is more to it than just covering the seeds. Eazy Mixx is a well balanced top layer substrate that prevents dehydration of your seeds and assures roots growing downwards instead of pushing seeds upwards or sideways.
